

## Annex 10 – Project analysis grids

---

This annex presents the analysis of the selected statistical projects of the sample. (see section 2.2.2).

The projects fiches have been developed to capture the data substantiating the indicators and judgement criteria. They are based on documentary information, answers to the questionnaire survey and interviews for the projects implemented in the countries visited. Only the indicators and judgement criteria for which information for the specific projects could be found are displayed in this annex.

This annex is purely a collection of facts and information. The aim was not to undertake a complete evaluation for each of these projects. The synthesis of the information gathered in the project fiches, together with other findings, is presented in section 3 of the report.
